

Understanding Your Mobile Device/Tablet

Facilitated by
Adam Dawes

Introduction

All of the new technology out there can cause one's head to spin! Just what can they do? What is the difference between Kindle, Android, iPad, or what kind of SMART Phone would be best for you?

What if I want to only listen to music....or surf the "net"?

What can each of these devices really do?

Join us for a quick demonstration of different devices and a chance for you to ask your burning question about the ever changing world of technology.

Class Agenda

- Section 1: Mobile devices (types available)
- Section 2: Operating Systems
- Section 3: Mobile Apps
- Section 4: Comparison charts overview.
- Section 5: Questions

Section 1: Mobile Devices (types available)

Mobile devices come in the following types:
Android Phone/Tablet, iPad, iPhone, and
Windows based phones and tablets.

Section 2: Operating Systems

Operating System

What is an operating system?

An operating system (OS) is a collection of software that manages computer hardware resources and provides common services for computer programs. The operating system is an essential component of the system software in a computer system.

Application programs usually require an operating system to function.

Section 2: Operating Systems
